

UNDERSTANDING ELECTRIC AND MAGNETIC FIELDS (EMF)

Questions have been raised about the possible health effects of 60-hertz (power frequency) electric and magnetic fields (EMF*), which are found wherever there is electric power. This insert contains information to help you understand the EMF issue as well as practical tips you can use to reduce your exposure at home and work.

Campos Eléctricos y Magnéticos (EMF, por sus siglas en inglés): Si desea recibir información en español, comuníquese con Pacific Gas and Electric Company al 1-800-660-6789

Can EMF Harm Your Health?

Electric and magnetic fields are present wherever electricity flows—around appliances and power lines in offices, schools and homes. Many researchers believe that if there is a risk of adverse health effects from usual residential exposures to EMF, it is probably just at the detection limit of human health studies. Nonetheless, any possible risk warrants further investigation. Varying results from epidemiological studies that looked at estimated EMF exposures and childhood leukemia are consistent with a weak link. Laboratory studies, including studies investigating a possible mechanism for health effects (mechanistic studies), provide little or no evidence to support this weak link.

Results from many research studies have been evaluated by international, national and California EMF research programs to determine whether EMF poses any health risk. Given the uncertainty of the issue, the medical and scientific communities have been unable to conclude that usual residential exposures to EMF cause health effects or to establish any standard or level of residential exposure that is known to be either safe or harmful. These facts remain unchanged by recent studies.

*The term EMF in this publication refers to extremely low frequency (ELF) 60-hertz electric and magnetic fields associated with power delivered by electric utilities. It does not refer to radio frequency (RF) waves associated with wireless communications such as cell phones.

Engineered Drought Catastrophe, Target California

Most of the "the golden state" is now parched, baked and dried far beyond any historical precedent. Reservoirs are nearly empty, streams are drying up, and forests are dying by the day. Catastrophic fires will also continue to decimate California due to the engineered drought.

by Dane Wigington,
GeoEngineeringWatch.org

Much of the state went through all of 2013 with no significant rain. Why? What will it take to wake people up to the "weather warfare" being waged on them? Geoengineering reduces overall global rainfall totals (though it can also trigger regions of torrential flooding). Intentionally caused drought is weather warfare, period. There is a great deal of disinformation out there already and its getting worse by the day. Even some of the biggest "alternative news sites" are helping to "tow the line" for the global elite by putting out articles on drought and "global cooling" which make no mention of the climate engineering at all. Yet, on the other hand, these same "news sites" claim to be aware of climate engineering and they say they are against it. Which is it? How can they be aware of the geoengineering programs and yet put out climate article after climate article without so much as mentioning the elephant in the room that is climate engineering? The articles from these "alternative media sites" are even claiming all the chaotic weather is just "normal cycles". This is exactly what corporate media does, so who's side are these alternative media sites on? How is it possible that any weather in a completely engineered climate system is "normal"? **Is This The End Of The Road?**

Many are finally beginning to wake up to the fact that the something is very wrong with the weather. Many are finally realizing something profound is happening in our skies. Some are now finally making the decision to get involved with the fight to

No Natural Weather

It is imperative that we all work together toward the goal of making the population as a whole understand that virtually all their "weather" is being completely manipulated. That there

manipulate the jet stream into historically unprecedented patterns. The manipulated jet stream is one of several primary factors relating to the climate chaos now being inflicted on planet Earth.

Photo taken from Center St. in Santa Cruz

is NO NATURAL WEATHER at this point. That we are all the victims of "weather warfare" and many of us will soon be climate refugees if we are not able to bring the climate engineering to light and to a halt. On top of all this we are all literally being poisoned by

further east in the US. The rain blocking high pressure ridge that the climate engineers have locked in place over the western US and the eastern Pacific pushes the jet stream straight north, carrying the moisture with it before rain can come anywhere near California. This moisture then travels as far as Alaska and the Arctic. The jet is then turned back south as it wraps clockwise around the HAARP/ionosphere heater created dome of high pressure. Then, it is pumped all the way down to the southern US carrying heavily sprayed and chemically ice nucleated moisture with it which enhances the artificial cool down of the eastern US.

Another part of the puzzle is likely this, a population that has no water and can not grow any food does not tend to be in a position to effectively protest the crimes of it's government. California has historically grown so much food for the nation that the catastrophic drought has very far reaching ramifications. Control the food supply and you control the population. There is also the growing effort by the government to take control of water rights in California and other regions in the west. The climate engineers literally

the toxic metal fallout from these programs, but that's another story. **Geoengineered Drought, Target California**

The recent NOAA map above illustrates an unprecedented pattern of precipitation or lack thereof. Almost the entire country is shown at above normal precipitation while California looks like it has a virtual "bullseye" of below normal rainfall predicted (scheduled). One can draw their own conclusions from this map, does this

humidity on the ground under man conditions which further dries out th already parched state. Now lets add th constant record high temperatures th often go along with consistent hig pressure. All things considered, its recipe for creating a dust bowl out a once beautiful state. Its a method f bringing the population of this state their knees.

Where Are The Geoengineers Concentrating Their Efforts, And How Cool Are They Making The Planet Overall?

The NASA temperature analysis map above should make clear where the climate engineers are more focused in their efforts to create "cool down". This map illustrates recent temperature trends as compared to the 30-year average. The NASA map clearly shows the only "cool places" on the planet compared to the long term average. These are of below normal temperatures are direct result of massive geoengineering efforts such as those described above. If the temperature variations on this map seem unnatural, they are. Though the US media is trying frantically to convince its population (considerable success) that the work in a deep freeze, this is patently false from a global perspective. The rapid swings in temperatures and conditions will persist and worsen as the climate engineers literally tear Earth's natural life support systems apart. The climate engineers can and are radically cooling the globe. <http://www.geoengineeringwatch.org>, <http://www.rtcc.org/2013/04/02/geoengineering-planet-artificially-could-cause-climate-food-supply.htm>, http://larryhammigan.com/is_haarp_being_used_to_cool_the_globe/
